Denver, CO 80206

Re: Aurora Community School  
Aurora, CO  
LSC #190680

Dear Mr. Campbell:

In response to your request, LSC Transportation Consultants, Inc. has prepared this updated traffic impact analysis for the proposed Aurora Community School. As shown on Figure 1, the school is proposing to locate in an existing retail shopping center southeast of the E. 6<sup>th</sup> Avenue (SH 30)/E. Centretech Parkway intersection in Aurora, Colorado.

## REPORT CONTENTS

The report contains the following: the existing roadway and traffic conditions in the vicinity of the site including the lane geometries, traffic controls, posted speed limits, etc.; the existing weekday peak-hour traffic volumes; the existing daily traffic volumes in the area; the typical weekday site-generated traffic volume projections for the site; the assignment of the projected traffic volumes to the area roadways; the projected short-term and long-term background and resulting total traffic volumes on the area roadways; a traffic signal warrant analysis at the E. 6<sup>th</sup> Avenue/Jasper Street/Site Access intersection; the site's projected traffic impacts; a recommended circulation plan for drop-off and pick-up operations; and recommended pedestrian accessible routes.

## LAND USE AND ACCESS

The site is proposed to include a public charter school with a capacity of 200 students in Phase 1 in late 2019 or early 2020 and a buildout capacity of 600 students by 2022. Access is provided by the various existing retail shopping center access points. Figure 2 shows the conceptual site plan. The school plans to open with about 200 students in Kindergarten and 1<sup>st</sup> and 2<sup>nd</sup> grades. Phase 1 will only utilize the north drop-off/pick-up area. The school will add a grade or two per year until they reach a student capacity of 600 in grades Kindergarten through 8<sup>th</sup> Grade in 2022. Approximately 265 students will utilize the north drop-off/pick-up area and about 335 students will utilize the south drop-off/pick-up area based on feedback from the school. This split will be adjusted as needed to best accommodate future conditions. The school plans to have a 15-minute stagger between the two drop-off/pick-up locations.

## ROADWAY AND TRAFFIC CONDITIONS

### Area Roadways

The major roadways in the site's vicinity are shown on Figure 1 and are described below.

- **E. 6<sup>th</sup> Avenue (SH 30)** is an east-west, four-lane major arterial roadway north of the site. It is classified R-A (Regional Highway) by CDOT. The intersection with E. Centretech Parkway is signalized with auxiliary turn lanes. The posted speed limit in the vicinity of the site is 40 mph. There are existing bus stops near E. Centretech Parkway.
- **E. Centretech Parkway** is a three-lane collector roadway west and south of the site. The intersection with E. 6<sup>th</sup> Avenue (SH 30) is signalized with auxiliary turn lanes. It connects E. 6<sup>th</sup> Avenue (SH 30) southeast to Airport Road. The posted speed limit in the vicinity of the site is 25 mph. There are existing bus stops south of E. 6<sup>th</sup> Avenue (SH 30).

### Existing Traffic Conditions

Figure 3 shows the existing traffic volumes, lane geometries, traffic controls, and posted speed limits in the site's vicinity on a typical weekday. The weekday peak-hour traffic volumes are from the attached traffic counts conducted by Counter Measures in July, 2019. Figure 3 also shows the lengths of the existing turn lanes in the study area that could be impacted by site traffic.

### 2022 and 2040 Background Traffic

Figure 4 shows the estimated 2022 background traffic and Figure 5 shows the estimated 2040 background traffic. The background traffic volumes assume an annual growth rate of 0.8 percent on E. 6<sup>th</sup> Avenue (SH 30) based on CDOT projections.

### Existing, 2022 Background, and 2040 Background Levels of Service

Level of service (LOS) is a quantitative measure of the level of congestion or delay at an intersection. Level of service is indicated on a scale from "A" to "F." LOS A is indicative of little congestion or delay and LOS F is indicative of a high level of congestion or delay. Attached are specific level of service definitions for signalized and unsignalized intersections.

The intersections in the study area were analyzed to determine the existing, 2022 background, and 2040 background levels of service using Synchro. The existing traffic signal timing plans were provided by City staff. Table 1 shows the level of service analysis results. The level of service reports are attached.

- **E. 6<sup>th</sup> Avenue (SH 30)/E. Centretech Parkway/Helena Street:** This signalized intersection currently operates at an overall LOS "B" during both morning and afternoon peak-hours and is expected to do so through 2040 without the addition of site traffic.
- **E. Centretech Parkway/5<sup>th</sup> Place/North Site Access:** All movements at this unsignalized intersection currently operate at LOS "B" or better and are expected to do so through 2040 without the addition of site traffic.

- **E. 6<sup>th</sup> Avenue (SH 30)/Jasper Street/Site Access:** All movements at this unsignalized intersection currently operate at LOS "C" or better with the exception of the northbound left/through movement which operates at LOS "F" in the afternoon peak-hour. By 2022 all movements are expected to operate at LOS "D" or better with the exception of the northbound left/through movement which is expected to operate at LOS "F" in both morning and afternoon peak-hours. The southbound approach is expected to operate at LOS "F" in the 2040 morning peak-hour. The southbound and northbound left and through movements are currently five vehicles per hour or lower and will remain low after completion of the school. In addition, both the southbound and northbound right-turn movements have existing acceleration lanes on E. 6<sup>th</sup> Avenue. This suggests a traffic signal warrant is unlikely to be met and the intersection could potentially be converted to three-quarter movement by others in the future.
- **E. 6<sup>th</sup> Avenue (SH 30)/RIRO Site Access:** All movements at this unsignalized right-in/right-out intersection currently operate at LOS "B" or better and are expected to do so through 2022. In 2040, all movements are expected to operate at LOS "C" or better.

## TRIP GENERATION

Table 2 shows the estimated average weekday, morning peak-hour, and afternoon peak-hour trip generation for the proposed land use based on the rates from *Trip Generation, 10<sup>th</sup> Edition, 2017* by the Institute of Transportation Engineers (ITE).

In Phase 1 in late 2019 or early 2020, the site is projected to generate about 370 vehicle-trips on the average weekday, with about half entering and half exiting during a 24-hour period. During the morning school peak-hour, which is expected to occur from 7:15 to 8:15 a.m., about 106 vehicles would enter and about 94 vehicles would exit the site. During the afternoon school peak-hour, which is expected to occur from 3:30 to 4:30 p.m., about 61 vehicles would enter and about 72 vehicles would exit.

At buildout in 2022, the site is projected to generate about 1,110 vehicle-trips on the average weekday, with about half entering and half exiting during a 24-hour period. During the morning school peak-hour, which is expected to occur from 7:15 to 8:15 a.m., about 353 vehicles would enter and about 314 vehicles would exit the site. During the afternoon school peak-hour, which is expected to occur from 3:30 to 4:30 p.m., about 180 vehicles would enter and about 211 vehicles would exit.

Table 2 also shows the number of students planned to be dropped off/picked up at the north side (265 students) and south side (335 students) of the building based on feedback from the school. This split will be adjusted as needed over time to best accommodate future conditions.

## TRIP ASSIGNMENT

Figure 6 shows the estimated assignment of Phase 1 site-generated traffic volumes based on 200 students being dropped off/picked up on the north side of the building. Figure 7 shows the estimated assignment of buildout site-generated traffic based on 600 students utilizing both drop-off/pick-up locations. These trip assignments are intended to avoid conflicts with other users of the shopping center, avoid the crossing of site traffic flowing into and out of the site, and help limit queue lengths by encouraging mostly right-turn movements exiting the site. Detailed circulation plans are provided later in this report.

**EXISTING PLUS SITE-GENERATED TRAFFIC AND 2022 AND 2040 TOTAL TRAFFIC**

Figure 8 shows the existing plus site-generated traffic which are sum of the traffic volumes in Figures 3 and 6. Figure 8 also shows the recommended existing plus site-generated traffic lane geometry and traffic control which is the same as the existing conditions in Figure 3.

Figure 9 shows the 2022 total traffic which is the sum of the traffic volumes in Figures 4 and 7. Figure 9 also shows the recommended 2022 lane geometry and traffic control which is the same as the existing conditions in Figure 3.

Figure 10 shows the 2040 total traffic which is the sum of the traffic volumes in Figures 5 and 7. Figure 10 also shows the recommended 2040 lane geometry and traffic control which is the same as the existing conditions in Figure 3.

**PROJECTED LEVELS OF SERVICE**

The intersections in the study area were analyzed to determine the existing plus site-generated, 2022 total, and 2040 total levels of service. Table 1 shows the level of service analysis results. The level of service reports are attached.

- **E. 6<sup>th</sup> Avenue (SH 30)/E. Centretech Parkway:** This signalized intersection is expected to operate at an overall LOS “B” during both morning and afternoon peak-hours through 2040 with or without the addition of site traffic.
- **E. Centretech Parkway/5<sup>th</sup> Place/North Site Access:** All movements at this unsignalized intersection are expected to operate at LOS “C” or better through 2040.
- **E. 6<sup>th</sup> Avenue (SH 30)/Jasper Street/Site Access:** All movements at this unsignalized intersection are expected to operate at LOS “D” or better during both peak-hours through 2040 with the following exception: The northbound left/through movement is expected to operate at LOS “F” in one or both peak-hours with or without the addition of site traffic. The southbound approach is expected to operate at LOS “F” in the 2040 morning peak-hour. The southbound and northbound left and through movements are currently five vehicles per hour or lower and will remain low after completion of the school. In addition, both the southbound and northbound right-turn movements have existing acceleration lanes on E. 6<sup>th</sup> Avenue. This suggests a traffic signal warrant is unlikely to be met and the intersection could potentially be converted to three-quarter movement by others in the future.
- **E. 6<sup>th</sup> Avenue (SH 30)/RIRO Site Access:** All movements at this unsignalized right-in/right-out intersection are expected to operate at LOS “C” or better through 2040 with or without the addition of site traffic.

**CIRCULATION PLAN**

Recommended traffic circulation plans for the north and south drop-off/pick-up areas are shown in Figures 11 and 12. Figure 13 shows the two plans consolidated in one figure. The intent of these plans is to avoid blockage of fire lanes, blockage at drive aisles that will likely be used by neighboring businesses, and to avoid conflicts of the internal travel routes. The plans

also identify parking areas that will be reserved for other businesses during the school's drop-off/pick-up operations.

These figures represent the maximum available on-site vehicle storage which will only be utilized if needed based on future demand. Doubled loaded drive aisles will only be used if necessary.

## **PARKING AVAILABILITY**

The applicant has coordinated with the other owners/tenants of the shopping center to verify the number of available parking spaces during drop-off/pick-up operations will be sufficient for their needs. Figure 11 shows there will be a minimum of 212 available parking spaces for other users during the busy drop-off/pick-up times. Colorado Gymnastics and the Church have the highest typical parking demands but their need is off-peak from the busy school times. A letter is included in the appendix from the owner of several adjoining properties in support of the circulation plan.

## **PEDESTRIAN PLAN**

Figure 14 shows the recommended pedestrian routes to/from the school. The north drop-off/pick-up area will need to accommodate a pedestrian accessible route between E. Centretech Parkway and the front building entrance. The south drop-off/ pick-up area will need to accommodate a pedestrian accessible crossing route between E. Centretech Parkway and the rear building entrance prior to opening the south drop-off/pick-up area.

## **TRAFFIC SIGNAL WARRANT ANALYSIS**

Figure 3 shows very low peak-hour traffic volumes for the northbound left and through movements and for the southbound left and through movements - each of these movements is currently five vehicles per hour or lower. These four movements are typically the movements that would cause a traffic signal warrant to be met. The proposed site circulation plan would not add trips to any of these movements so the addition of school traffic is not expected to meet a traffic signal warrant at this location. The intersection may need to be converted to three-quarter movement by others in the future.

## **CONCLUSIONS AND RECOMMENDATIONS**

### **Trip Generation**

1. In Phase 1 in late 2019 or early 2020, the site is projected to generate about 370 vehicle-trips on the average weekday, with about half entering and half exiting during a 24-hour period. During the morning school peak-hour, about 106 vehicles would enter and about 94 vehicles would exit the site. During the afternoon school peak-hour, about 61 vehicles would enter and about 72 vehicles would exit.
2. At buildout in 2022, the site is projected to generate about 1,110 vehicle-trips on the average weekday, with about half entering and half exiting during a 24-hour period. During the morning school peak-hour, about 353 vehicles would enter and about 314 vehicles would exit the site. During the afternoon school peak-hour, about 180 vehicles would enter and about 211 vehicles would exit.

**Projected Levels of Service**

3. The E. 6<sup>th</sup> Avenue (SH 30)/E. Centretech Parkway/Helena Street signalized intersection is expected to operate at an overall LOS “B” during both morning and afternoon peak-hour through 2040 with or without the addition of site traffic.
4. All movements at the unsignalized intersections analyzed are expected to operate at LOS “D” or better through 2040 with or without the addition of site traffic with the following exception: The northbound left/through movement at the E. 6<sup>th</sup> Avenue (SH 30)/Jasper Street/Site Access intersection is expected to operate poorly in 2022 and 2040. The southbound approach is expected to operate at LOS “F” in the 2040 morning peak-hour. The southbound and northbound left and through movements are currently five vehicles per hour or lower and will remain low after completion of the school. In addition, both the southbound and northbound right-turn movements have existing acceleration lanes on E. 6<sup>th</sup> Avenue. This suggests a traffic signal warrant is unlikely to be met and the intersection could potentially be converted to three-quarter movement by others in the future.

**Conclusions**

5. The impact of the Aurora Community School can be accommodated by the existing roadway network with implementation of the recommendations below.

**Recommendations**

6. The north drop-off/pick-up area shown in Figure 11 and a pedestrian accessible route to the north building entrance will be needed for opening day conditions in late 2019 or early 2020 and will require the construction of a roughly 300-foot raised median/island to accommodate the drop-off/pick-up. Other improvements will be needed as well such as ADA ramp adjustments, crosswalk adjustments, etc.
7. The south drop-off/pick-up area shown in Figure 12 will likely be implemented in the near future as the school builds out. A pedestrian accessible route between E. Centretech Parkway and the rear entrance will be needed prior to opening of the south drop-off/pick-up area.
8. Staff/volunteers will be needed to supervise/monitor the circulation and pedestrian routes shown in Figures 11, 12, 13, and 14. These figures show the recommended location of staff/volunteers - some of these locations could potentially be dropped over time as appropriate.

\* \* \* \* \*

We trust our findings will assist you in gaining approval of the proposed Aurora Community School development. Please contact me if you have any questions or need further assistance.

Sincerely,

LSC TRANSPORTATION CONSULTANTS, INC.

Scale: 1"=600'

#### LEGEND:

$$\frac{26}{35} = \frac{\text{AM Peak Hour Traffic}}{\text{PM Peak Hour Traffic}}$$

2,500 = Average Daily Traffic

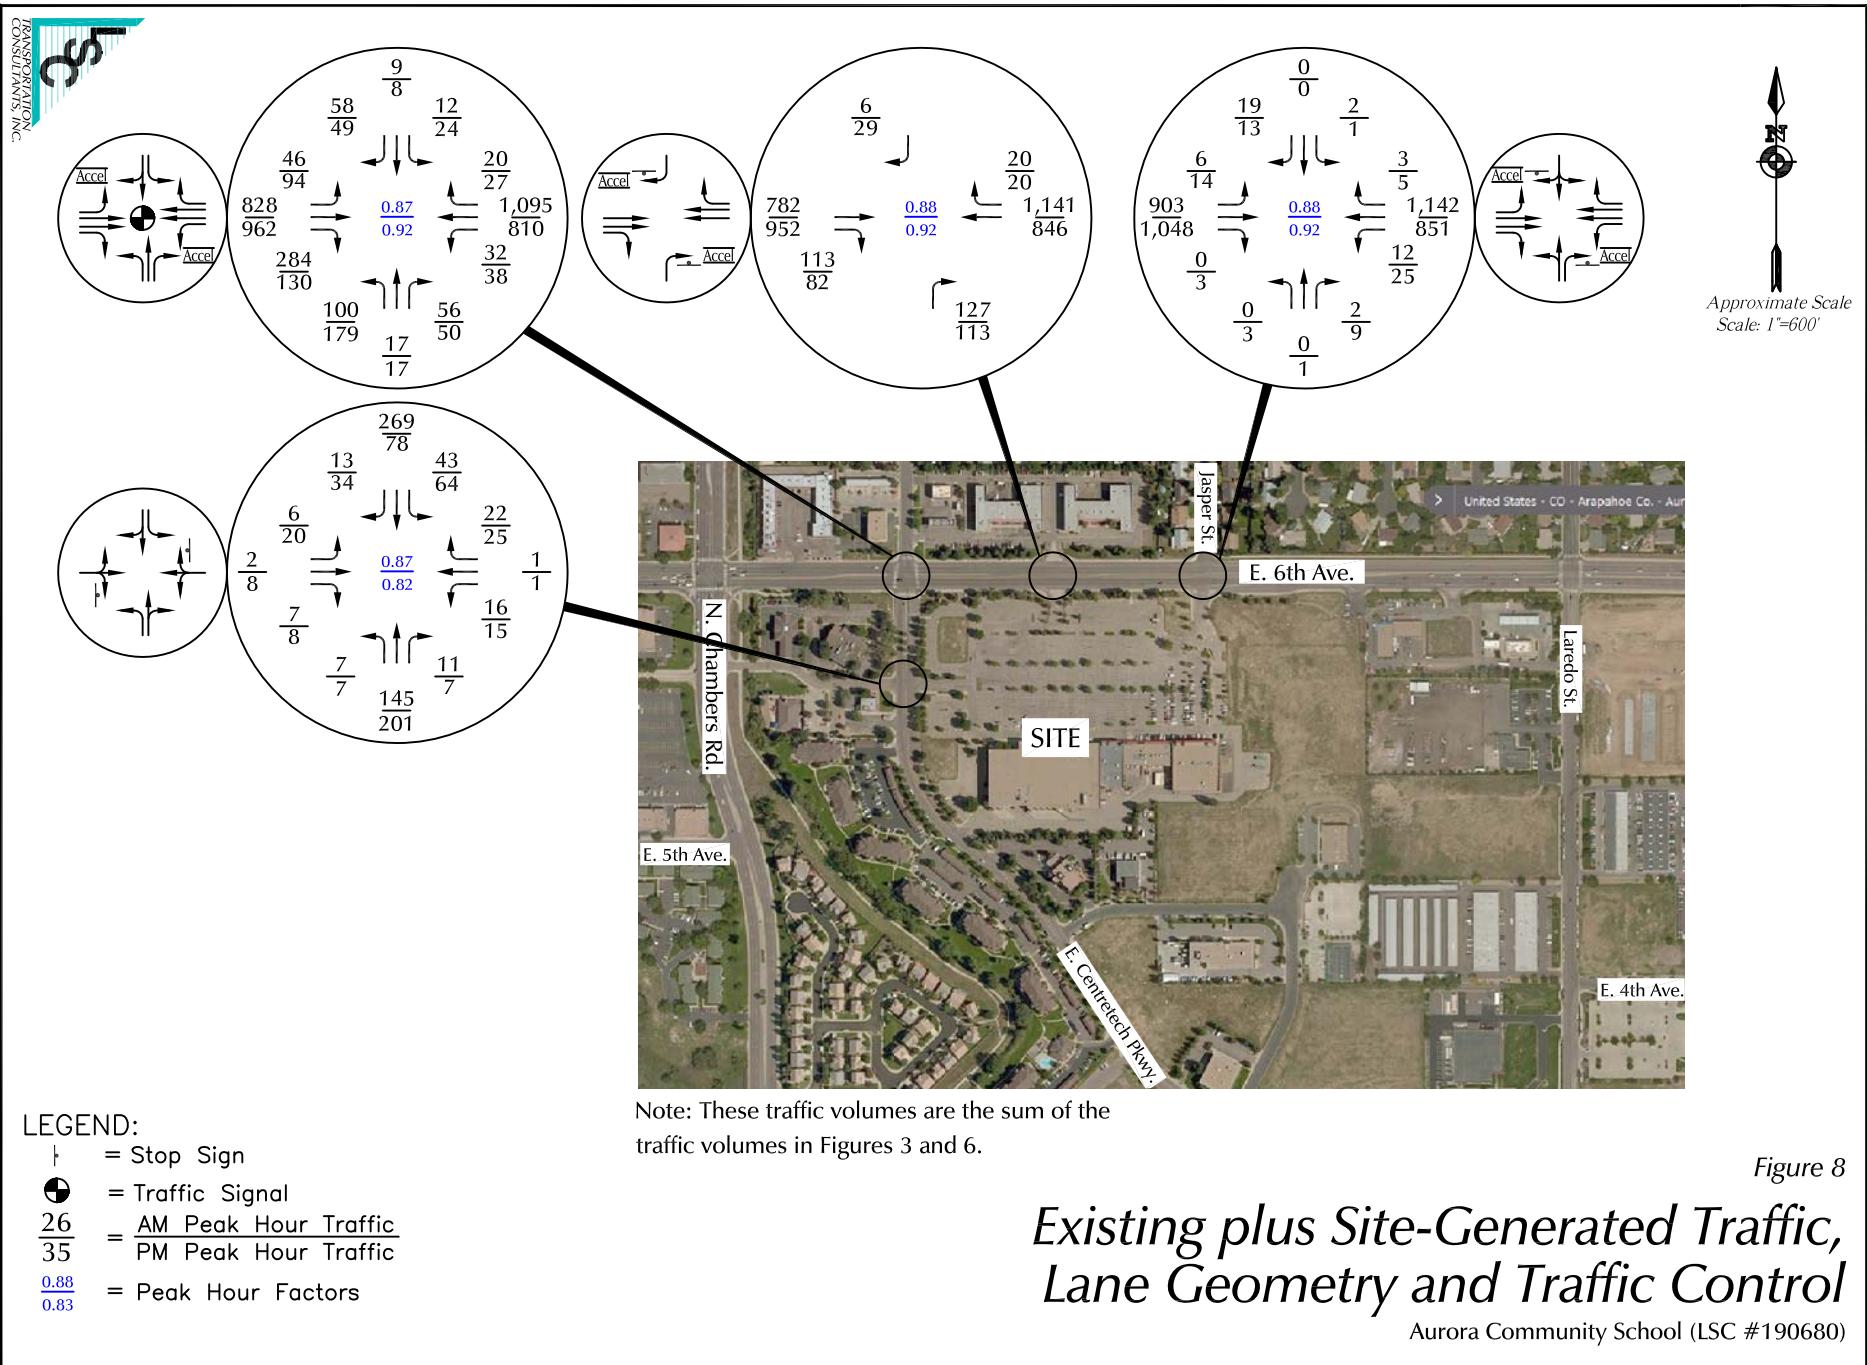

- Notes:
- Assumes 265 elementary students and 335 middle school students for the purposes of drop-off/pick-up.
  - This scenario assumes drop-off/pick-up operations both north and south of the building as shown in Figures 11, 12 and 13.

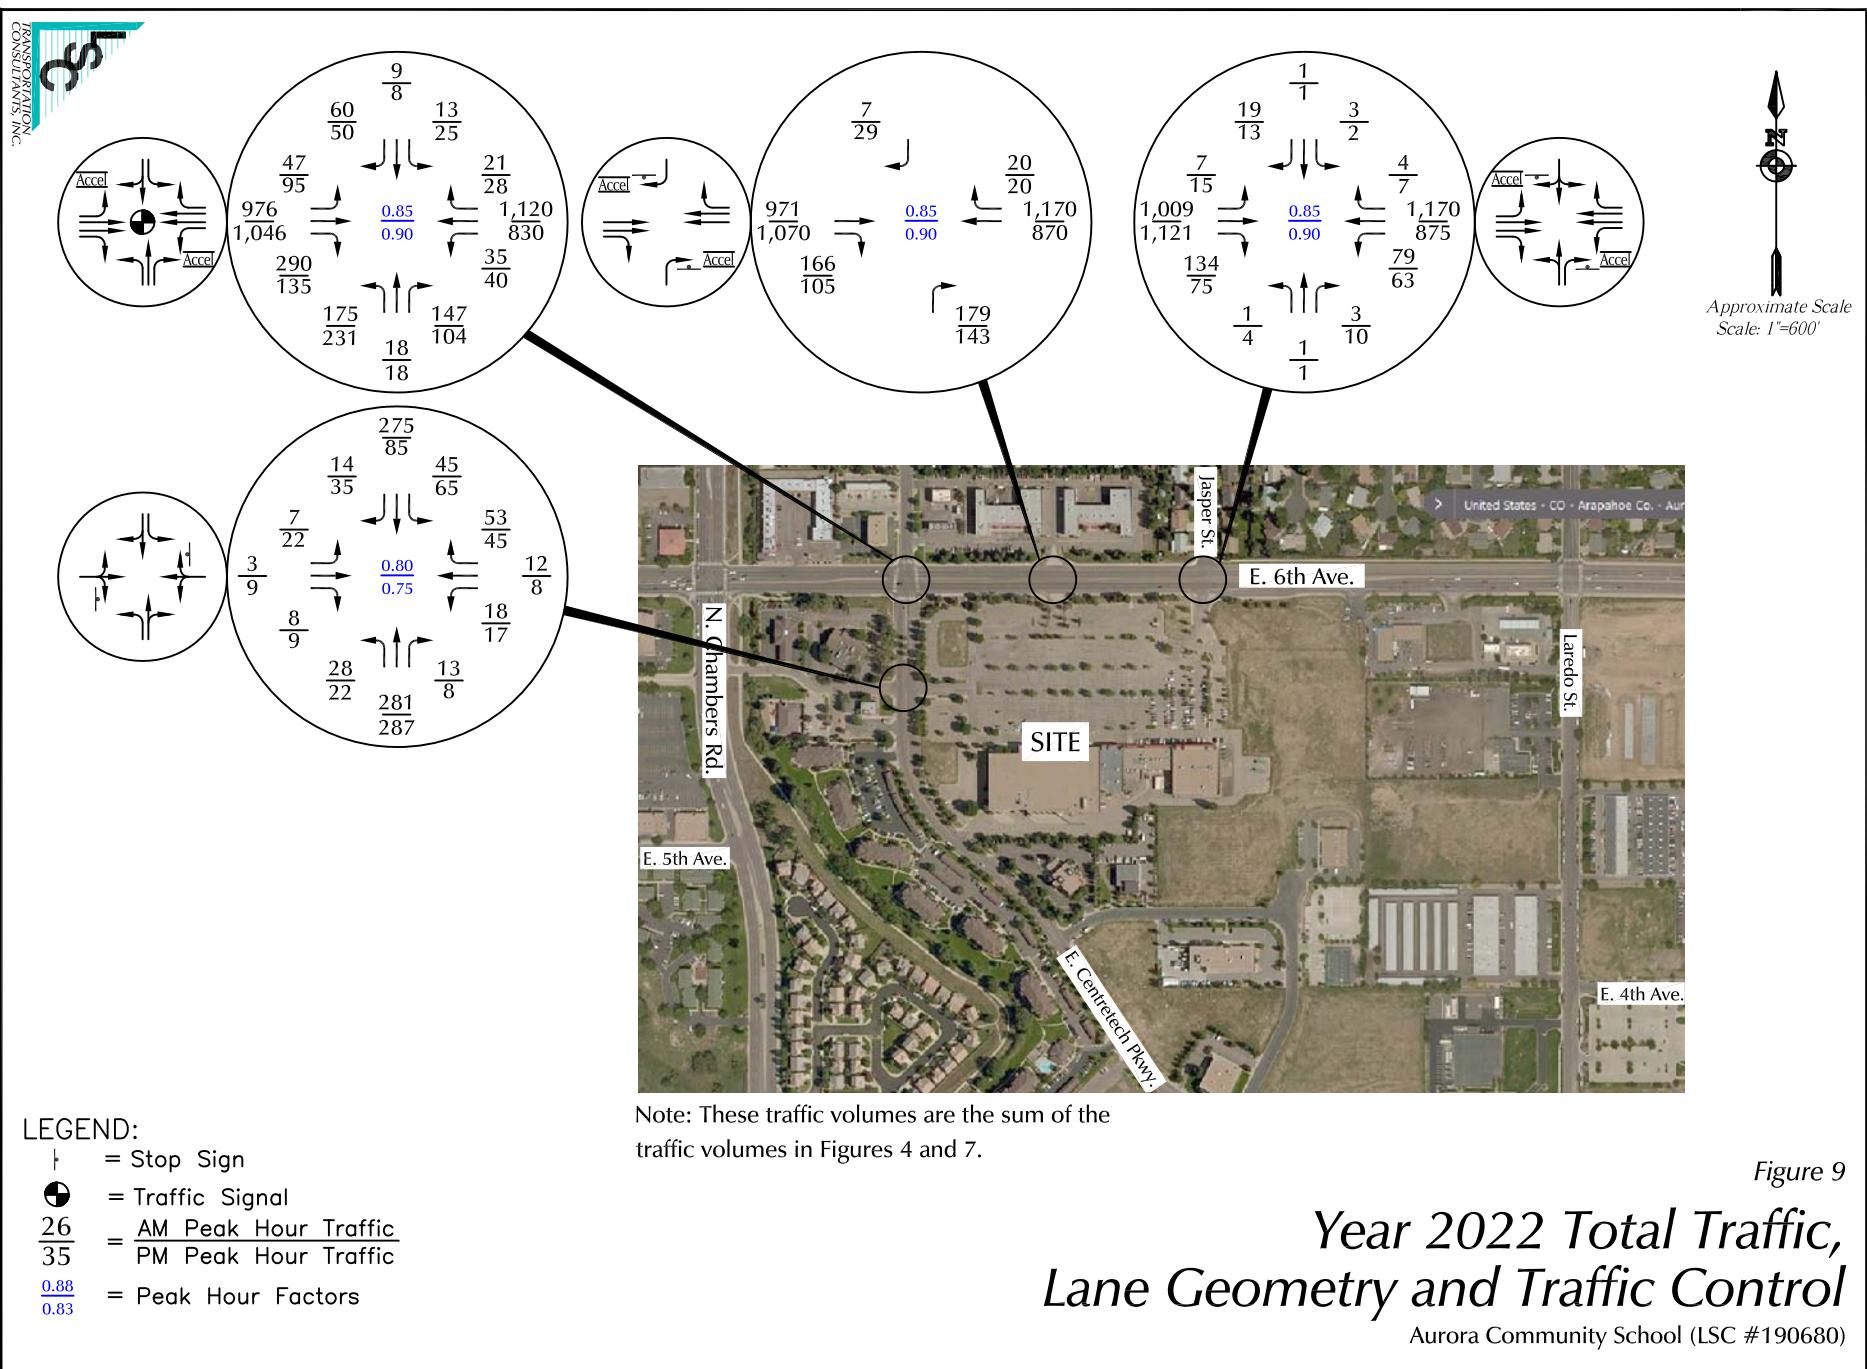

\* The WB LT entering movement may need to be eliminated if the movement frequently spills back and blocks westbound through traffic. The existing left-turn lane could be lengthened from about 250 feet to about 450 feet with median construction. The capacity analysis reports show the queue length is expected to be minimal.

Note: These traffic volumes are the sum of the traffic volumes in Figures 5 and 7.

## Year 2040 Total Traffic, Lane Geometry and Traffic Control

Aurora Community School (LSC #190680)

Figure 10

#### LEGEND:

- = Circulation Route – No Stopping or Parking
- - - = Queuing Area
- [Green] = Raised Median/Island for Drop-Off/Pick-Up (300 feet long)
- [Yellow Diagonal Lines] = Staff/Teacher Parking (+/- 30 spaces)
- [Yellow Horizontal Lines] = Parking for businesses to the west of the school (+/- 62 spaces)
- [Blue Diagonal Lines] = Parking for businesses to the east of the school (+/- 150 spaces)
- \* = Potential Location of Staff/Volunteer

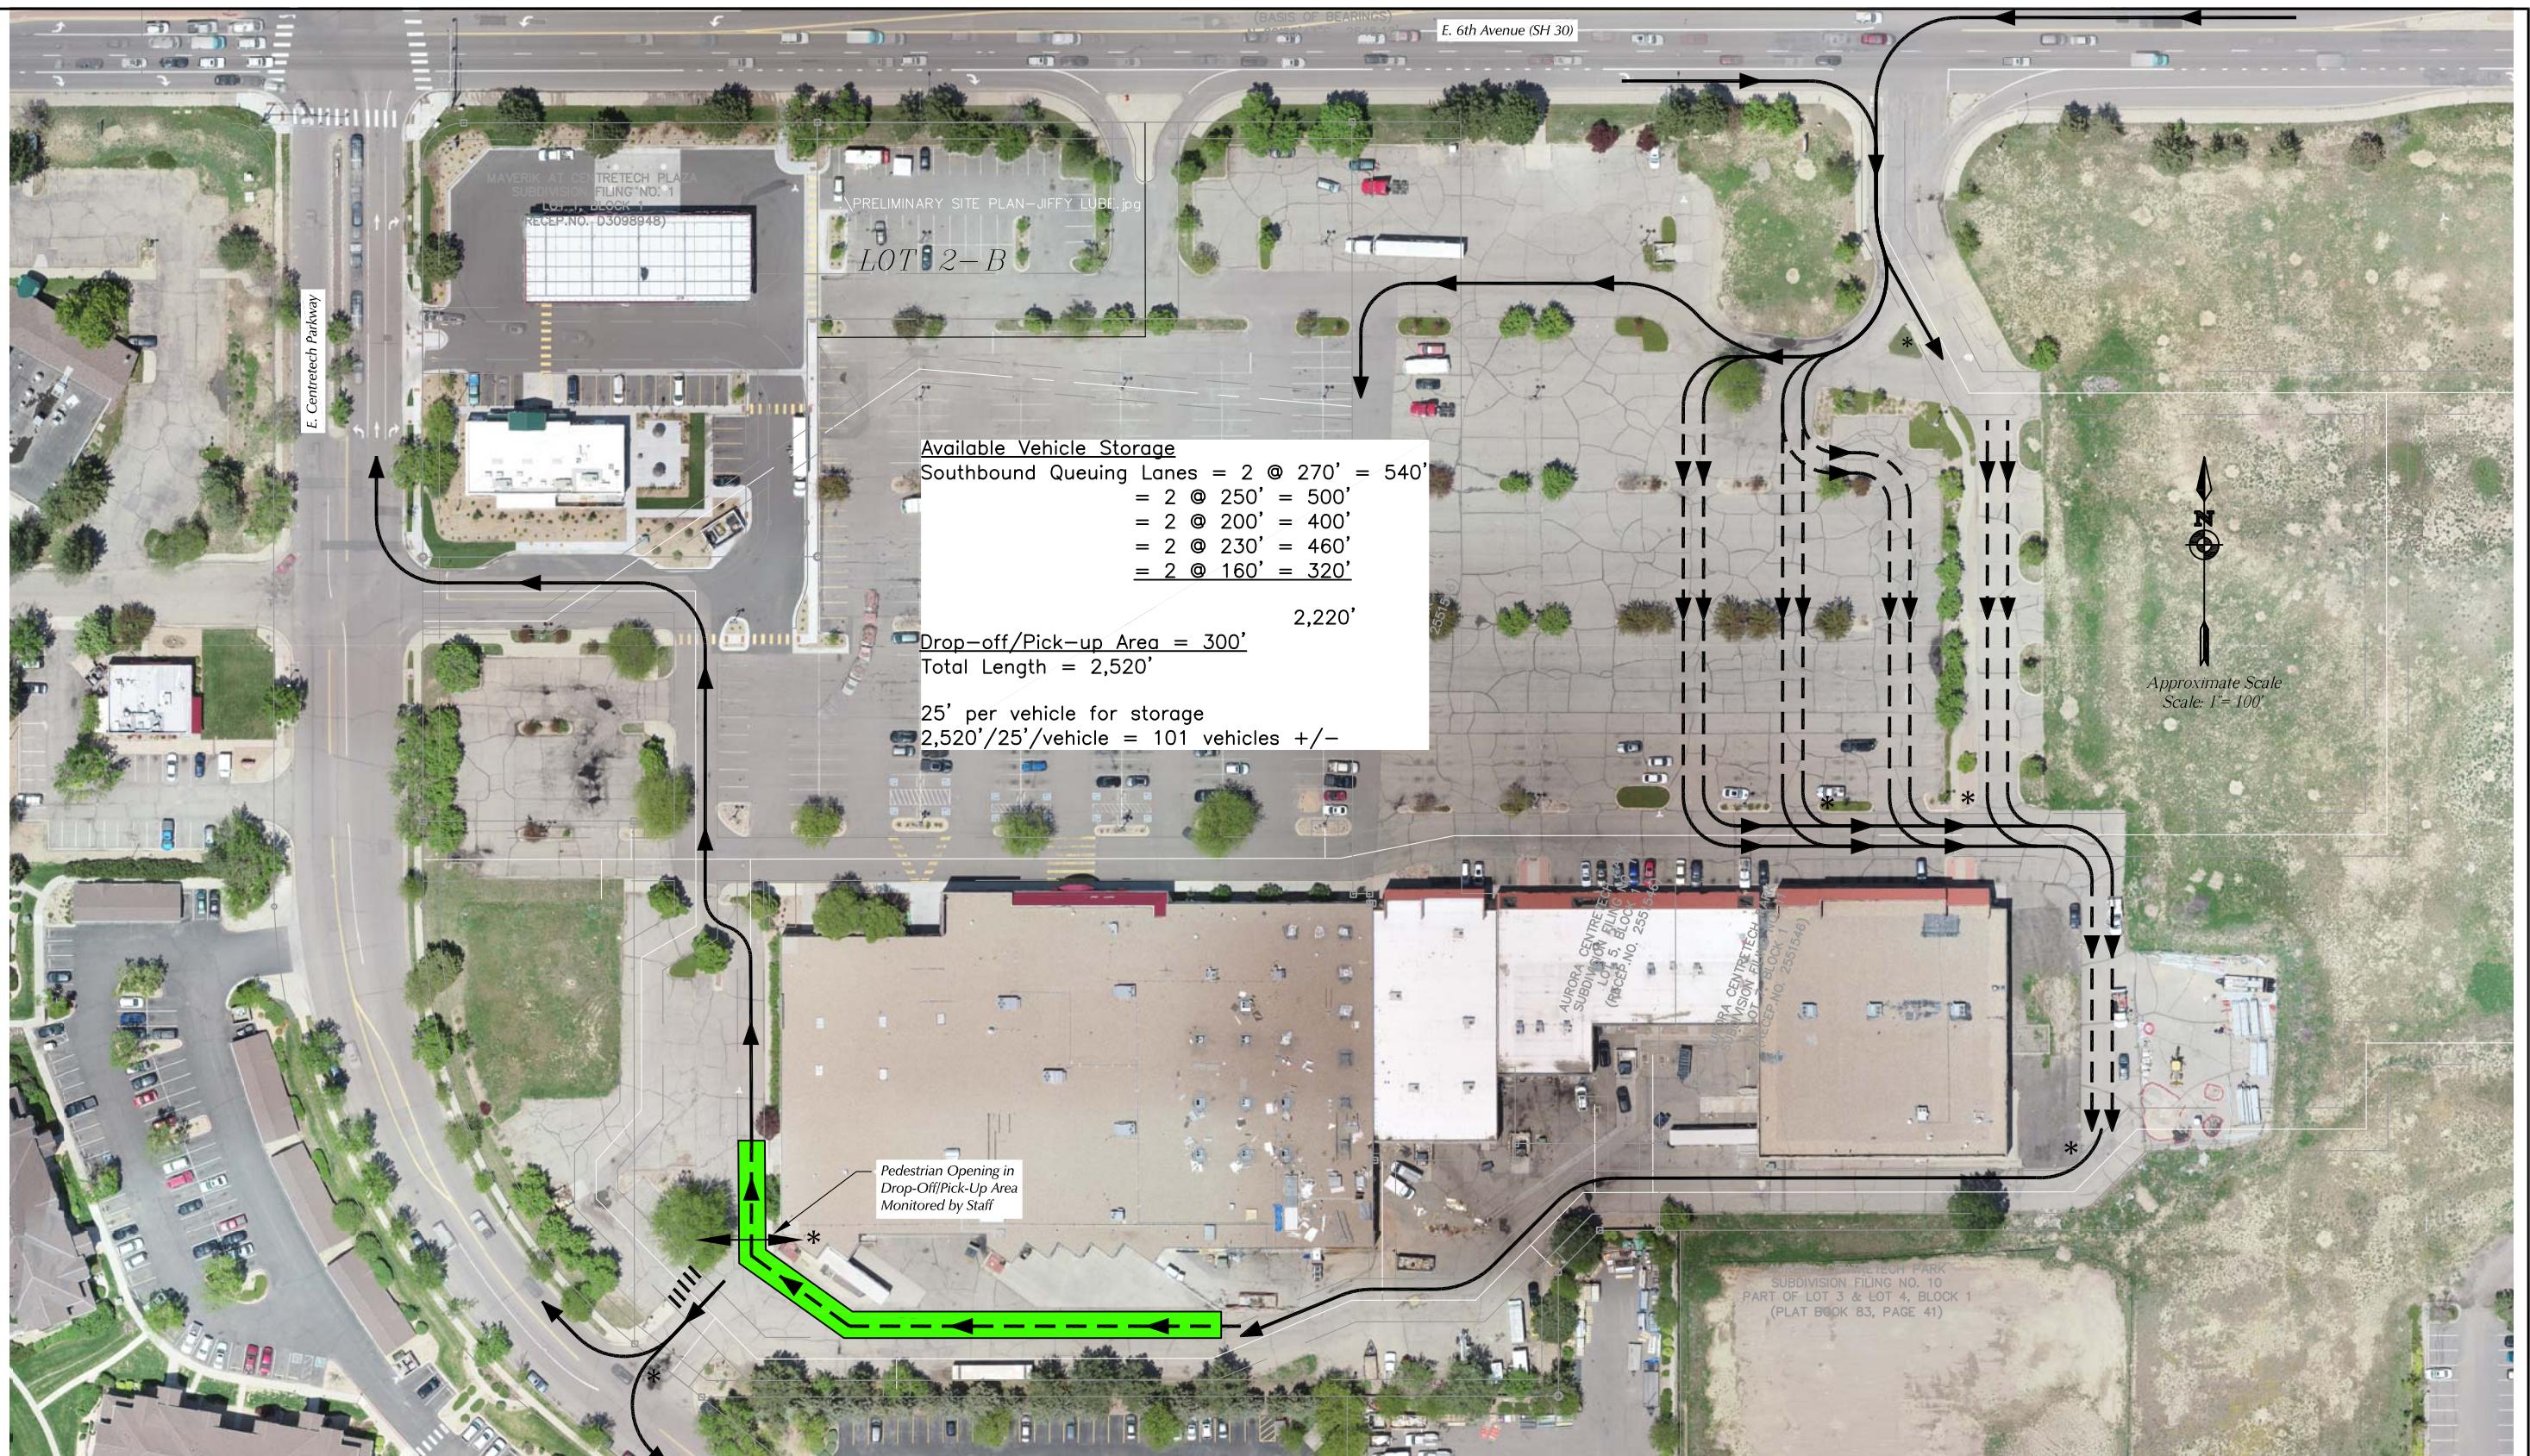

#### Notes:

- The morning peak hour is expected to have 156 vehicles enter the site and 139 vehicles exit the site. The roughly 97 queuing spaces in the north drop-off/pick-up area will be sufficient because the drop-off operation does not need to store all vehicles at one time because some students arrive and their parent/guardian departs the site before other vehicles arrive in the queue.
- The afternoon peak hour is expected to have 80 vehicles enter the site and 93 vehicles exit the site. These 80 vehicles can be stored in the north drop-off/pick-up area.
- This figure represents the maximum available on-site vehicle storage on the north side of the building which will only be utilized if needed based on future demand. Double loaded drive aisles will only be used if necessary.

Figure 11

## Circulation Plan for North Drop-Off/Pick-Up Area

Aurora Community School (LSC #190680)

**LEGEND:**

- = Circulation Route – No Stopping or Parking
- - - = Queuing Area
- = 18' Wide (300' +/-) Drop-Off/Pick-Up Area (10' Lane + 8' Pedestrian Walking Area) – located north of existing fire lane
- \* = Potential Location of Staff/Volunteer

**Notes:**

1. The morning peak hour is expected to have 197 vehicles enter the site and 175 vehicles exit the site. The roughly 101 queuing spaces in the south drop-off/pick-up area will be sufficient because the drop-off operation does not need to store all vehicles at one time because some students arrive and their parent/guardian departs the site before other vehicles arrive in the queue.
2. The afternoon peak hour is expected to have 100 vehicles enter the site and 118 vehicles exit the site. These 100 vehicles can be stored in the south drop-off/pick-up area.
3. This figure represents the maximum available on-site vehicle storage on the north side of the building which will only be utilized if needed based on future demand. Double loaded drive aisles will only be used if necessary.

**Figure 12**

## Circulation Plan for South Drop-Off/Pick-Up Area

Aurora Community School (LSC #190680)

Note: This figure shows the circulation plans for both the north and south sides of the building as well as the maximum areas available for vehicle storage after preserving parking areas and vehicle circulation areas for other businesses in the area. The full vehicle storage areas shown will only be used if necessary to accommodate future demand.

## LEVEL OF SERVICE DEFINITIONS

From *Highway Capacity Manual, Transportation Research Board, 2016, 6th Edition*

### SIGNALIZED INTERSECTION LEVEL OF SERVICE (LOS)

<u>LOS</u>	<u>Average Vehicle Delay</u> sec/vehicle	<u>Operational Characteristics</u>
<b>A</b>	<10 seconds	Describes operations with low control delay, up to 10 sec/veh. This LOS occurs when progression is extremely favorable and most vehicles arrive during the green phase. Many vehicles do not stop at all. Short cycle lengths may tend to contribute to low delay values.
<b>B</b>	10 to 20 seconds	Describes operations with control delay greater than 10 seconds and up to 20 sec/veh. This level generally occurs with good progression, short cycle lengths, or both. More vehicles stop than with LOS A, causing higher levels of delay.
<b>C</b>	20 to 35 seconds	Describes operations with control delay greater than 20 and up to 35 sec/veh. These higher delays may result from only fair progression, longer cycle length, or both. Individual cycle failures may begin to appear at this level. Cycle failure occurs when a given green phase does not serve queued vehicles, and overflows occur. The number of vehicles stopping is significant at this level, though many still pass through the intersection without stopping.
<b>D</b>	35 to 55 seconds	Describes operations with control delay greater than 35 and up to 55 sec/veh. At LOS D, the influence of congestion becomes more noticeable. Longer delays may result from some combination of unfavorable progression, long cycle lengths, and high v/c ratios. Many vehicles stop, and the proportion of vehicles not stopping declines. Individual cycle failures are noticeable.
<b>E</b>	55 to 80 seconds	Describes operations with control delay greater than 55 and up to 80 sec/veh. These high delay values generally indicate poor progression, long cycle lengths, and high v/c ratios. Individual cycle failures are frequent.
<b>F</b>	>80 seconds	Describes operations with control delay in excess of 80 sec/veh. This level, considered unacceptable to most drivers, often occurs with over-saturation, that is, when arrival flow rates exceed the capacity of lane groups. It may also occur at high v/c ratios with many individual cycle failures. Poor progression and long cycle lengths may also contribute significantly to high delay levels.

## LEVEL OF SERVICE DEFINITIONS

From *Highway Capacity Manual, Transportation Research Board, 2016, 6th Edition*

### UNSIGNALIZED INTERSECTION LEVEL OF SERVICE (LOS)

Applicable to Two-Way Stop Control, All-Way Stop Control, and Roundabouts

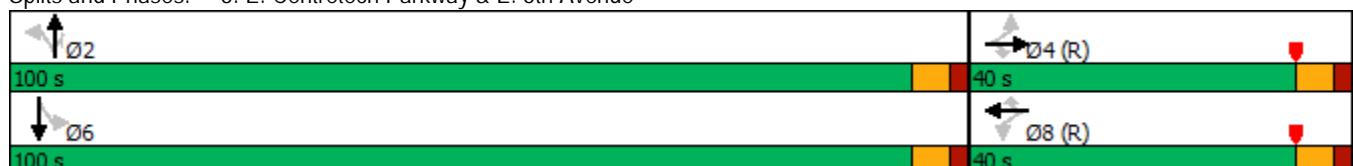

LOS	Average Vehicle Control Delay	Operational Characteristics
A	<10 seconds	Normally, vehicles on the stop-controlled approach only have to wait up to 10 seconds before being able to clear the intersection. Left-turning vehicles on the uncontrolled street do not have to wait to make their turn.
B	10 to 15 seconds	Vehicles on the stop-controlled approach will experience delays before being able to clear the intersection. The delay could be up to 15 seconds. Left-turning vehicles on the uncontrolled street may have to wait to make their turn.
C	15 to 25 seconds	Vehicles on the stop-controlled approach can expect delays in the range of 15 to 25 seconds before clearing the intersection. Motorists may begin to take chances due to the long delays, thereby posing a safety risk to through traffic. Left-turning vehicles on the uncontrolled street will now be required to wait to make their turn causing a queue to be created in the turn lane.
D	25 to 35 seconds	This is the point at which a traffic signal may be warranted for this intersection. The delays for the stop-controlled intersection are not considered to be excessive. The length of the queue may begin to block other public and private access points.
E	35 to 50 seconds	The delays for all critical traffic movements are considered to be unacceptable. The length of the queues for the stop-controlled approaches as well as the left-turn movements are extremely long. There is a high probability that this intersection will meet traffic signal warrants. The ability to install a traffic signal is affected by the location of other existing traffic signals. Consideration may be given to restricting the accesses by eliminating the left-turn movements from and to the stop-controlled approach.
F	>50 seconds	The delay for the critical traffic movements are probably in excess of 100 seconds. The length of the queues are extremely long. Motorists are selecting alternative routes due to the long delays. The only remedy for these long delays is installing a traffic signal or restricting the accesses. The potential for accidents at this intersection are extremely high due to motorist taking more risky chances. If the median permits, motorists begin making two-stage left-turns.

## Intersection Summary

Cycle Length: 135

Actuated Cycle Length: 135

Offset: 0 (0%), Referenced to phase 4:EBTL and 8:WBTL, Start of Yellow

Natural Cycle: 55

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.79

Intersection Signal Delay: 13.5

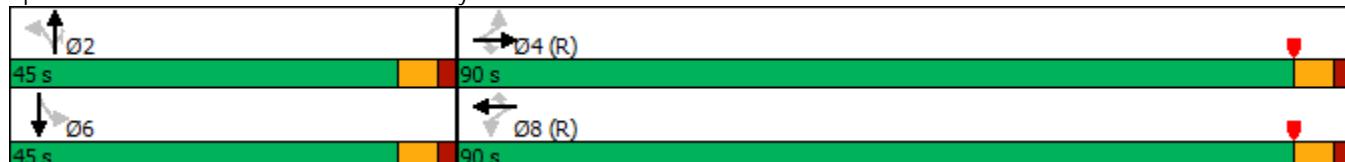

Intersection LOS: B

Intersection Capacity Utilization 62.3%

ICU Level of Service B

Analysis Period (min) 15

Splits and Phases: 3: E. Centretech Parkway &amp; E. 6th Avenue

HCM 6th TWSC  
6: E. Centretech Parkway & Site Access

## Intersection Summary

Cycle Length: 135

Actuated Cycle Length: 135

Offset: 0 (0%), Referenced to phase 4:EBTL and 8:WBTL, Start of Yellow

Natural Cycle: 60

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.81

Intersection Signal Delay: 14.8

Intersection LOS: B

Intersection Capacity Utilization 67.3%

ICU Level of Service C

Analysis Period (min) 15

Splits and Phases: 3: E. Centretech Parkway &amp; E. 6th Avenue

HCM 6th TWSC  
6: E. Centretech Parkway & Site Access

Notes

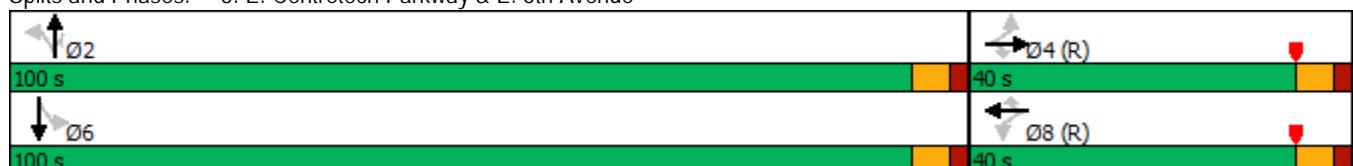

~: Volume exceeds capacity    \$: Delay exceeds 300s    +: Computation Not Defined    \*: All major volume in platoon

To Whom This May Concern,

I, Ioannis Adrianakos, give permission at the shopping center known as 6<sup>th</sup> and centretech, to allow cars for the Aurora Charter School to stage, in front of, or behind my buildings. They are allowed to do this during normal school hours and special events. My buildings include the Lady fitness Center, Chinese restaurant, and tae kwon do studio.

Ioannis Andrianakos
