Englewood, CO 80112

Re: Murphy Creek East
Aurora, CO
LSC #181110

Dear Mr. Huey:

In response to your request, LSC Transportation Consultants, Inc. has prepared this updated traffic impact analysis for the proposed Murphy Creek East development to address City comments. As shown on Figure 1, the site is located south of E. Jewell Avenue and west of Harvest Road in the City of Aurora, Colorado.

REPORT CONTENTS

The report contains the following: the existing roadway and traffic conditions in the vicinity of the site including the lane geometries, traffic controls, posted speed limits, etc.; the existing weekday peak-hour traffic volumes; the existing daily traffic volumes in the area; the typical weekday site-generated traffic volume projections for the site; the assignment of the projected traffic volumes to the area roadways; the proposed pedestrian and trail connectivity; the projected short-term and long-term background and resulting total traffic volumes on the area roadways; the site's projected traffic impacts; and any recommended roadway improvements to mitigate the site's traffic impacts.

LAND USE AND ACCESS

The site is proposed to include about 538 single-family dwelling units, about 269 multi-family dwelling units, and a Pre-K through 8 public school with about 700 students. Figure 2 shows the conceptual site plan and the traffic analysis zones. The details for the school site are not yet available so the school trips were loaded to S. Flat Rock Trail south of Intersection #10.

ROADWAY AND TRAFFIC CONDITIONS

Area Roadways

The major roadways in the site's vicinity are shown on Figure 1 and are described below.

- **Gun Club Road (State Highway 30)** is a two-lane arterial roadway in the vicinity of the site. The intersection with E. Jewell Avenue is signalized with auxiliary turn lanes. The posted speed limit is 55 mph in the vicinity of the site. The City of Aurora *Northeast Aurora Transportation Study* (NEATS) shows this roadway as a six-lane arterial in the long term so it is assumed to be six lanes by 2040.
- **Harvest Road** is a two-lane roadway northeast of the site. The intersection with E. Jewell Avenue is stop-sign controlled. The NEATS shows a six-lane arterial north of E. Jewell Avenue and a two-lane collector south of E. Jewell Avenue, so these widths are assumed by 2040.
- **E. Yale Avenue** does not exist but is planned to pass through the site from Harvest Road to S. Gun Club Road. The NEATS shows a four-lane minor arterial through the site, but this analysis supports a four-lane roadway for the first block east from S. Gun Club Road and then transitioning to a two/three-lane section after passing through a proposed roundabout at intersection #12.
- **E. Jewell Avenue** is a two-lane roadway north of the site. The intersection with S. Gun Club Road (SH 30) is signalized with auxiliary turn lanes. The posted speed limit is 40 mph in the vicinity of the site. The NEATS shows a six-lane arterial in the long term so it is assumed to be six lanes by 2040.

Existing Traffic Conditions

Figure 3 shows the existing lane geometries, traffic controls, posted speed limits and traffic volumes in the site's vicinity on a typical weekday. Figure 3 also shows the existing turn lane lengths. The weekday peak-hour traffic volumes and daily traffic counts are based on the attached traffic counts conducted by Counter Measures in September, 2018.

2023 and 2040 Background Traffic

Figures 4a and 5a show the estimated 2023 and 2040 background traffic. The 2023 background traffic assumes two percent annual growth for five years. The 2040 background traffic is based on recent NEATS modeling updates completed by the City and buildout of the balance of Murphy Creek. Figures 4b and 5b show the recommended 2023 and 2040 lane geometry and traffic control.

Existing, 2023, and 2040 Background Levels of Service

Level of service (LOS) is a quantitative measure of the level of congestion or delay at an intersection. Level of service is indicated on a scale from "A" to "F." LOS A is indicative of little congestion or delay and LOS F is indicative of a high level of congestion or delay. Attached are specific level of service definitions for signalized and unsignalized intersections.

The intersections in Figures 3, 4a, and 5a were analyzed to determine the existing, 2023, and 2040 background levels of service using Synchro. Table 1 shows the level of service analysis results. The level of service reports are attached.

1. **S. Gun Club Road (SH 30)/E. Jewell Avenue:** This signalized intersection currently operates at an overall LOS "C" or better during both morning and afternoon peak-hours. In 2023, the morning peak-hour is expected to operate at LOS "D". In 2040, with the recommended improvements, both peak-hours are expected to operate at LOS "D". There are a few individual movement expected to operate at LOS "E" or "F" but no further mitigation is recommended because all four approaches are already planned to include dual left-turn lanes and dedicated right-turn deceleration and acceleration lanes.
2. **E. Jewell Avenue/S. Old Tom Morris Road:** All movements at this unsignalized intersection currently operate at LOS "B" or better during both morning and afternoon peak-hours and are expected to do so through 2023. By 2040, this intersection is expected to be signalized and as such is expected to operate at an overall LOS "C" during both peak-hours. There are few movements expected to operate at LOS "E" but no further mitigation is recommended.
3. **E. Jewell Avenue/Full Movement Access:** Several movements at this future unsignalized intersection are expected to operate at LOS "E" or "F" during one or both peak-hours through 2040. This intersection was shown as three-quarter movement in the original GDP and will not likely meet a traffic signal warrant per Table 3 so may need to be converted to three-quarter movement in the long term. The left-turn movements from E. Jewell Avenue are expected to benefit from gaps created by upstream traffic signals.
4. **E. Jewell Avenue/S. Flat Rock Trail:** All movements at this unsignalized intersection currently operate at LOS "A" during both morning and afternoon peak-hours and are expected to operate at LOS "B" or better through 2023. By 2040, this intersection is expected to be signalized and as such is expected to operate at an overall LOS "A" during the morning peak-hour and LOS "B" during the afternoon peak-hour.
5. **E. Jewell Avenue/Harvest Road:** All movements at this unsignalized intersection currently operate at LOS "A" or better during both morning and afternoon peak-hours and are expected to do so through 2023. By 2040, this intersection is expected to be signalized and as such is expected to operate at an overall LOS "D" during both peak-hours. There are a few individual movements expected to operate at LOS "E" but no further mitigation is recommended.
6. **S. Gun Club Road/Commercial Access:** This future signalized intersection is expected to operate at LOS "A" during both peak-hours through 2040. There are a few individual movements expected to operate at LOS "E" but no further mitigation is recommended.
7. **S. Flat Rock Trail/East-West Internal Road:** All movements at this future unsignalized intersection are expected to operate at LOS "A" during both morning and afternoon peak-hours in 2040.
8. **Harvest Road/East-West Internal Road:** All movements at this future unsignalized intersection are expected to operate at LOS "C" or better during both morning and afternoon peak-hours in 2040.

9. **S. Gun Club Road/E. Yale Avenue:** This future signalized intersection is expected to operate at an overall LOS "C" during both peak-hours in 2040. There are a few individual movements expected to operate at LOS "E" but no further mitigation is recommended.
10. **S. Flat Rock Trail/Warren Street:** All movements at this future unsignalized intersection are expected to operate at LOS "A" during both morning and afternoon peak-hours in 2040.
11. **Harvest Road/Warren Street:** All movements at this future unsignalized intersection are expected to operate at LOS "C" or better during both morning and afternoon peak-hours in 2040.
12. **E. Yale Avenue/Roundabout Access:** This future roundabout controlled intersection is expected to operate at an overall LOS "B" or better during both peak-hours in 2040. A Rodel analysis would also show very good operations.
13. **E. Yale Avenue/Full Movement Access:** All movements at this future unsignalized intersection are expected to operate at LOS "C" or better during both morning and afternoon peak-hours in 2040.
14. **E. Yale Avenue/S. Flat Rock Trail:** This future roundabout controlled intersection is expected to operate at an overall LOS "A" during both peak-hours in 2040. A Rodel analysis would also show very good operations. The roundabout will likely not be needed until E. Yale Avenue connects west to S. Gun Club Road.
17. **E. Yale Avenue/Harvest Road:** This future roundabout controlled intersection is expected to operate at an overall LOS "A" during both peak-hours in 2040. A Rodel analysis would also show very good operations. The roundabout will likely not be needed until E. Yale Avenue connects west to S. Gun Club Road.
18. **S. Gun Club Road/RIRO Access:** All movements at this future unsignalized intersection are expected to operate at LOS "A" during both morning and afternoon peak-hours in 2040. This is due to a future right-turn acceleration lane on S. Gun Club Road.
19. **S. Gun Club Road/Three-Quarter Access:** The southbound left-turn movement at this future unsignalized intersection is expected to operate at LOS "F" during both peak-hours in 2040. Operations will be improved by periodic gaps created by upstream traffic signals. The southbound left-turn movement is recommended to remain to provide relief to the southbound left-turn movement at Intersection #9 to the north.
20. **Harvest Road/Local Access:** All movements at this future unsignalized intersection are expected to operate at LOS "C" or better during both morning and afternoon peak-hours in 2040.

TRIP GENERATION

Table 2 shows the estimated average weekday, morning peak-hour, and afternoon peak-hour trip generation for the proposed land use based on the rates from *Trip Generation, 10th Edition, 2017* by the Institute of Transportation Engineers (ITE).

The proposed Murphy Creek East site is projected to generate about 8,403 vehicle-trips on the average weekday, with about half entering and half exiting during a 24-hour period. During the morning peak-hour, which generally occurs for one hour between 6:30 and 8:30 a.m., about 375 vehicles would enter and about 602 vehicles would exit the site. During the afternoon peak-hour, which generally occurs for one hour between 4:00 and 6:00 p.m., about 487 vehicles would enter and about 314 vehicles would exit.

DIRECTIONAL DISTRIBUTION

Figure 6 shows the estimated directional distribution of the site-generated traffic volumes on the area roadways. The estimates were based on the location of the site with respect to the regional population, employment, and activity centers; and the site's proposed land use.

TRIP ASSIGNMENT

Figure 7a shows the estimated 2023 assignment of site-generated traffic volumes based on the trip generation estimate (from Table 2), the directional distribution shown in Figure 6, and the roadway network expected to be in place by 2023.

Figure 7b shows the estimated 2040 assignment of buildout site-generated traffic based on the trip generation estimate (from Table 2), the directional distribution shown in Figure 6, and the buildout roadway network.

2023 AND 2040 TOTAL TRAFFIC

Figure 8a shows the estimated 2023 total traffic which is the sum of the 2023 background traffic volumes (from Figure 4a) and the 2023 site-generated traffic volumes (from Figure 7a). Figure 8b shows the recommended 2023 lane geometry and traffic control. The future roundabouts at Intersections #14 and #17 will likely not be needed until E. Yale Avenue connects west to S. Gun Club Road. Interim conditions will need to be coordinated with City staff.

Figure 9a shows the estimated 2040 total traffic which is the sum of the 2040 background traffic volumes (from Figure 5a) and the 2040 site-generated traffic volumes (from Figure 7b). Figure 9b shows the recommended 2040 lane geometry and traffic control.

Figure 9c shows the estimated 95th percentile queue lengths and recommended turn lane lengths for various movements as well as the recommended number of through lanes and street classifications on the major roadways. The queuing reports are attached for reference.

PROJECTED LEVELS OF SERVICE

The intersections in Figures 8a and 9a were analyzed to determine the 2023 and 2040 total levels of service. Table 1 shows the level of service analysis results. The level of service reports are attached.

- 1. S. Gun Club Road (SH 30)/E. Jewell Avenue:** This signalized intersection is expected to operate at an overall LOS "E" during the morning peak-hour and LOS "D" during the afternoon peak-hour through 2023. Two through lanes will be needed on S. Gun Club Road through the intersection by 2023 to mitigate the overall LOS "E". In 2040, with the recom-

mended improvements, both peak-hours are expected to operate at LOS "D". There are a few individual movements expected to operate at LOS "E" or "F" but no further mitigation is recommended because all four approaches are already planned to include dual left-turn lanes and dedicated right-turn deceleration and acceleration lanes.

2. **E. Jewell Avenue/S. Old Tom Morris Road:** All movements at this unsignalized intersection are expected to operate at LOS "C" or better during both morning and afternoon peak-hours through 2023. By 2040, this intersection is expected to be signalized and as such is expected to operate at an overall LOS "D" or better during both peak-hours. There are a few individual movements expected to operate at LOS "E" but no further mitigation is recommended.
3. **E. Jewell Avenue/Full Movement Access:** Several movements at this future unsignalized intersection are expected to operate at LOS "E" or "F" during one or both peak-hours through 2040. This intersection was shown as full movement in the original GDP and will not likely meet a traffic signal warrant per Table 3 so may need to be converted to three-quarter movement in the long term. The left-turn movements from E. Jewell Avenue are expected to benefit from gaps created by upstream traffic signals.
4. **E. Jewell Avenue/S. Flat Rock Trail:** All movements at this unsignalized intersection are expected to operate at LOS "D" or better during both morning and afternoon peak-hours through 2023. By 2040, this intersection is expected to be signalized and as such is expected to operate at an overall LOS "B" during the morning peak-hour and LOS "C" during the afternoon peak-hour. The eastbound left-turn movement is expected to operate at LOS "E" in the afternoon peak-hour by 2040 but no further mitigation is recommended.
5. **E. Jewell Avenue/Harvest Road:** All movements at this future unsignalized intersection are expected to operate at LOS "B" or better during both morning and afternoon peak-hours through 2023. By 2040, this intersection is expected to be signalized and as such is expected to operate at an overall LOS "D" during both peak-hours. There are a few individual movements expected to operate at LOS "E" but no further mitigation is recommended.
6. **S. Gun Club Road/Commercial Access:** This future signalized intersection is expected to operate at LOS "A" during both peak-hours through 2040. There are a few individual movements expected to operate at LOS "E" but no further mitigation is recommended.
7. **S. Flat Rock Trail/East-West Internal Road:** All movements at this future unsignalized intersection are expected to operate at LOS "B" or better during both morning and afternoon peak-hours through 2040.
8. **Harvest Road/East-West Internal Road:** All movements at this future unsignalized intersection are expected to operate at LOS "D" or better during both morning and afternoon peak-hours through 2040.
9. **S. Gun Club Road/E. Yale Avenue:** This future signalized intersection is expected to operate at an overall LOS "C" during both peak-hours in 2040.

10. **S. Flat Rock Trail/Warren Street:** All movements at this future unsignalized intersection are expected to operate at LOS "B" or better during both morning and afternoon peak-hours through 2040. An enhanced pedestrian crossing is proposed at or near this intersection and should be located based on the details of the future school site plan. The recommended enhancement is a rectangular rapid flashing beacon (RRFB) and will be at the cost of the master developer.
11. **Harvest Road/Warren Street:** All movements at this future unsignalized intersection are expected to operate at LOS "D" or better during both morning and afternoon peak-hours through 2040.
12. **E. Yale Avenue/Roundabout Access:** This future roundabout controlled intersection is expected to operate at an overall LOS "C" or better during both peak-hours through 2040. A Rodel analysis would also show good operations.
13. **E. Yale Avenue/Full Movement Access:** All movements at this future unsignalized intersection are expected to operate at LOS "D" or better during both morning and afternoon peak-hours through 2040.
14. **E. Yale Avenue/S. Flat Rock Trail:** This future roundabout controlled intersection is expected to operate at an overall LOS "A" during both peak-hours through 2040. A Rodel analysis would also show very good operations.
15. **E. Yale Avenue/Southwest Site Access:** All movements at this future unsignalized intersection are expected to operate at LOS "C" or better during both morning and afternoon peak-hours through 2040.
16. **E. Yale Avenue/Southeast Site Access:** All movements at this future unsignalized intersection are expected to operate at LOS "B" or better during both morning and afternoon peak-hours through 2040.
17. **E. Yale Avenue/Harvest Road:** This future roundabout controlled intersection is expected to operate at an overall LOS "A" during both peak-hours in 2040. A Rodel analysis would also show very good operations.
18. **S. Gun Club Road/RIRO Access:** All movements at this future unsignalized intersection are expected to operate at LOS "A" during both morning and afternoon peak-hours through 2040. This is due to a future right-turn acceleration lane on S. Gun Club Road.
19. **S. Gun Club Road/Three-Quarter Access:** The southbound left-turn movement at this future unsignalized intersection is expected to operate at LOS "F" during both peak-hours through 2040. Operations will be improved by periodic gaps created by upstream traffic signals. The southbound left-turn movement is recommended to remain to provide relief to the southbound left-turn movement at Intersection #9 to the north.
20. **Harvest Road/Local Access:** All movements at this future unsignalized intersection are expected to operate at LOS "C" or better during both peak-hours through 2040.

PEDESTRIAN/TRAIL CONNECTIVITY

Figure 10 shows the proposed pedestrian and trail connectivity within the study area.

TRAFFIC SIGNAL WARRANT ANALYSES

Figures 11a through 17b show the projected 2023 and 2040 peak-hour turning volumes at the E. Jewell Avenue/S. Old Tom Morris Road, E. Jewell Avenue/Full Movement Access, E. Jewell Avenue/S. Flat Rock Trail, E. Jewell Avenue/Harvest Road, E. Jewell Avenue/Commercial Access, E. Jewell Avenue/E. Yale Avenue, and Harvest Road/E. Yale Avenue intersections plotted on both a four-hour and peak-hour warrant chart. Table 3 summarizes the results.

CONCLUSIONS AND RECOMMENDATIONS

Trip Generation

1. The proposed Murphy Creek East site is projected to generate about 8,403 vehicle-trips on the average weekday, with about half entering and half exiting during a 24-hour period. During the morning peak-hour, about 375 vehicles would enter and about 602 vehicles would exit the site. During the afternoon peak-hour, about 487 vehicles would enter and about 314 vehicles would exit.

Projected Levels of Service

2. All movements at the unsignalized intersections analyzed are expected to operate at LOS "D" or better during both morning and afternoon peak-hours through 2040 with the recommended improvements with the following exceptions: Several movements at the E. Jewell Avenue/Full Movement Site Access intersection (Intersection #3) are expected to operate at LOS "E" or "F" during one or both peak-hours. The southbound left-turn movement at the S. Gun Club Road/Three-Quarter Access intersection is expected to operate at LOS "F" in both peak-hours in 2040. Operations will be improved by periodic gaps created by upstream traffic signals. Further detail is provided in the report narrative.
3. All signalized or roundabout controlled intersections are expected to operate at overall acceptable levels of service with the following exception: The S. Gun Club Road/E. Jewell Avenue intersection (Intersection #1) is expected to operate at an overall LOS "E" in the morning peak-hour in 2023. This would be mitigated by providing two through lanes in each direction of S. Gun Club Road through the intersection. Further detail is provided in the report narrative.

Conclusions

4. The impact of the site can be accommodated by the existing and planned roadway improvements with the following recommended improvements.

Recommendations

5. The recommended lane geometry for 2023 and 2040 is shown in Figures 8b and 9b with additional detail provided in Figure 9c. The future roundabouts at Intersections #14 and #17 will likely not be needed until E. Yale Avenue connects west to S. Gun Club Road.
6. Figure 9c shows the projected 2040 95th percentile queue lengths, the recommended turn lane lengths, and the recommended number of through lanes and street classifications on each major roadway.
7. Table 3 summarizes the traffic signal warrant analyses that were completed at several intersections within the study area.

Murphy Creek East (LSC #181110)

Note: Turn lane lengths for signalized intersections are based on the 95th percentile queue lengths with a minimum of 150 feet and for unsignalized intersections are based on the requirements of the State Highway Access Code. All turn lane lengths on S. Gun Club Road are based on the requirements of the State Highway Access Code.

* Both lanes will be the length of the longest 95th percentile queue length with one of the lanes having the additional deceleration length.

LEGEND:

$\frac{25'}{25'}$ = 2040 AM Peak 95th Percentile Length

$\frac{25'}{25'}$ = 2040 PM Peak 95th Percentile Length

- (B) 2040 Background PM Peak = (5319,143)
- (C) 2040 Total AM Peak = (4600,50)
- (D) 2040 Total PM Peak = (5370,143)

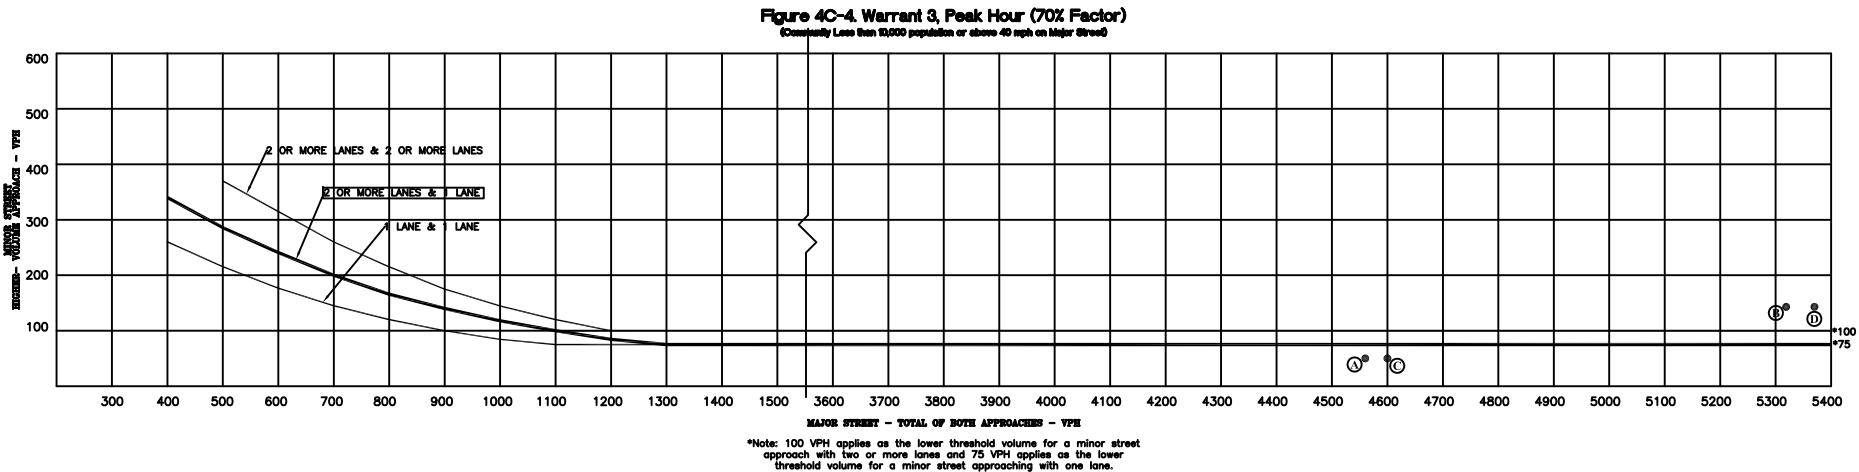

This warrant will likely be met by 2040 due to afternoon early evening commercial trips.

This is intersection #6 on Figures 5a and 9a.

Figure 15a

Warrant 2 - Four-Hour Vehicular Volume E. Jewell Avenue/Commercial Access

Murphy Creek East (LSC #181110)

Data Points = (Major Street, Minor Street)

- (A) 2040 Background AM Peak = (4560,50)
- (B) 2040 Background PM Peak = (5319,143)
- (C) 2040 Total AM Peak = (4600,50)
- (D) 2040 Total PM Peak = (5370,143)

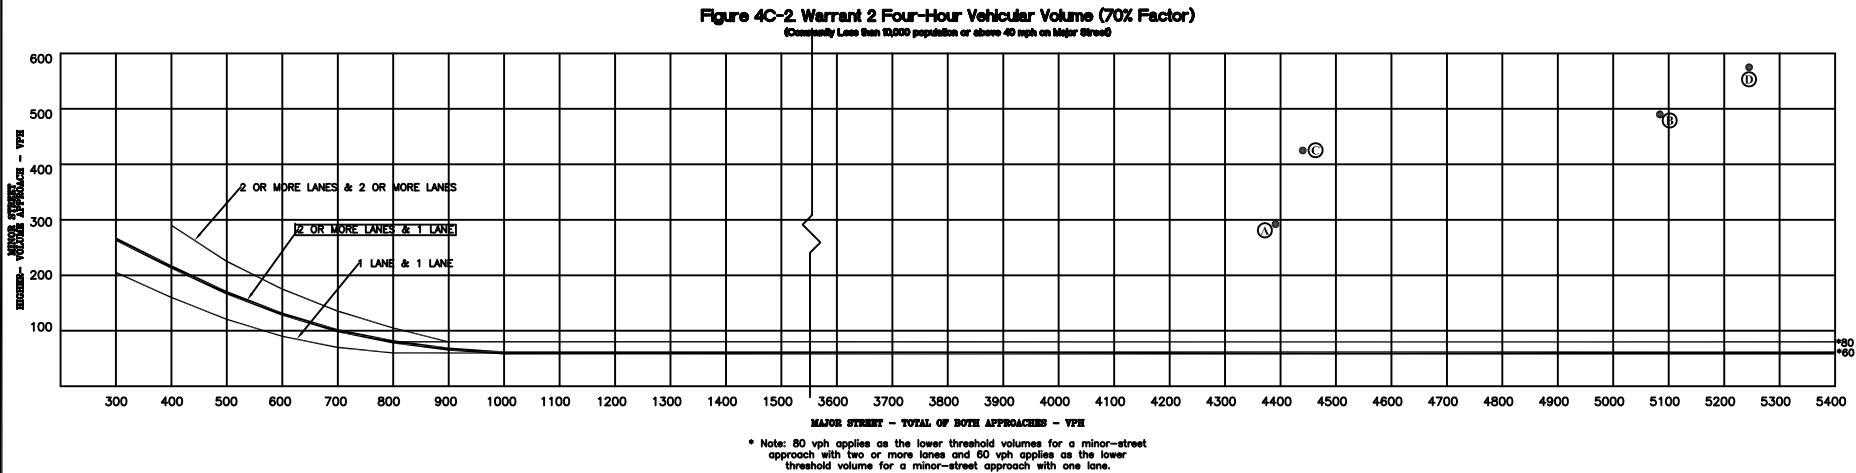

This warrant will likely be met by 2040 due to afternoon early evening commercial trips.

This is intersection #6 on Figures 5a and 9a.

Figure 15b

Warrant 3 - Peak-Hour Vehicular Volume E. Jewell Avenue/Commercial Access

Murphy Creek East (LSC #181110)

Data Points = (Major Street, Minor Street)

- (A) 2040 Background AM Peak = (4391,292)
- (B) 2040 Background PM Peak = (5084,490)
- (C) 2040 Total AM Peak = (4440,425)
- (D) 2040 Total PM Peak = (5245,575)

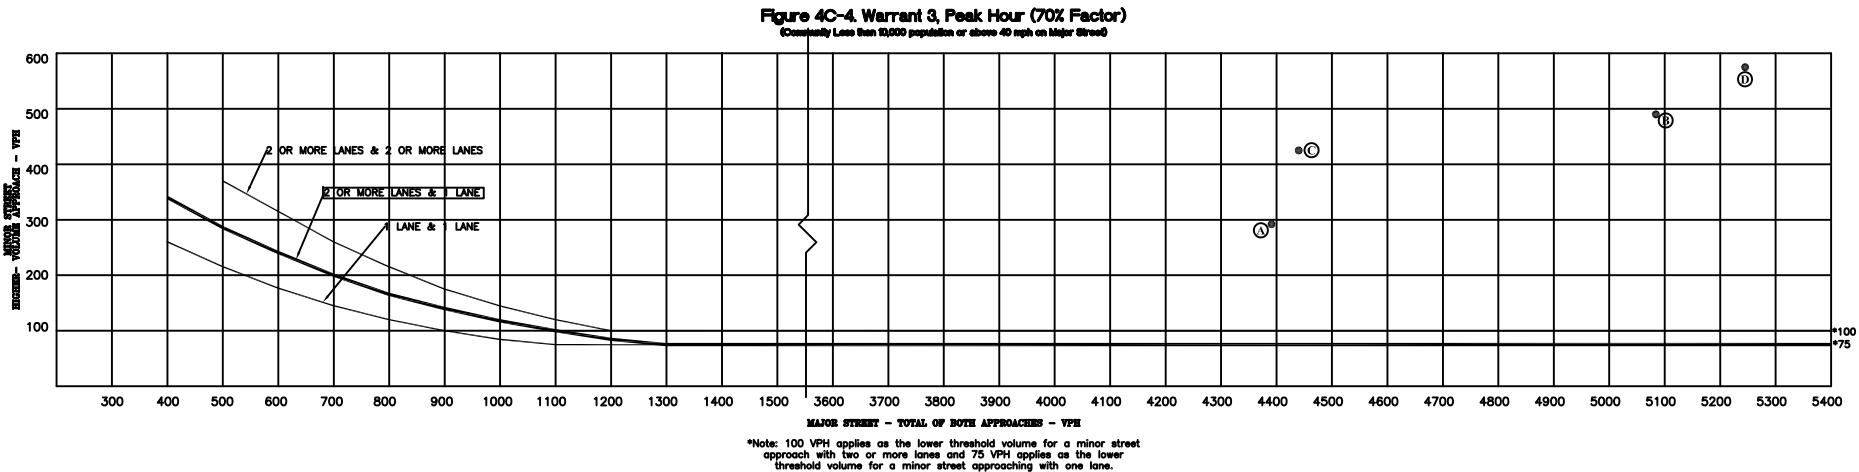

This warrant will likely be met by 2040.

This is intersection #9 on Figures 5a and 9a.

Figure 16a

Warrant 2 - Four-Hour Vehicular Volume E. Jewell Avenue/E. Yale Avenue

Murphy Creek East (LSC #181110)

Data Points = (Major Street, Minor Street)

- (A) 2040 Background AM Peak = (4391,292)
- (B) 2040 Background PM Peak = (5084,490)
- (C) 2040 Total AM Peak = (4440,425)
- (D) 2040 Total PM Peak = (5245,575)

This warrant will likely be met by 2040.

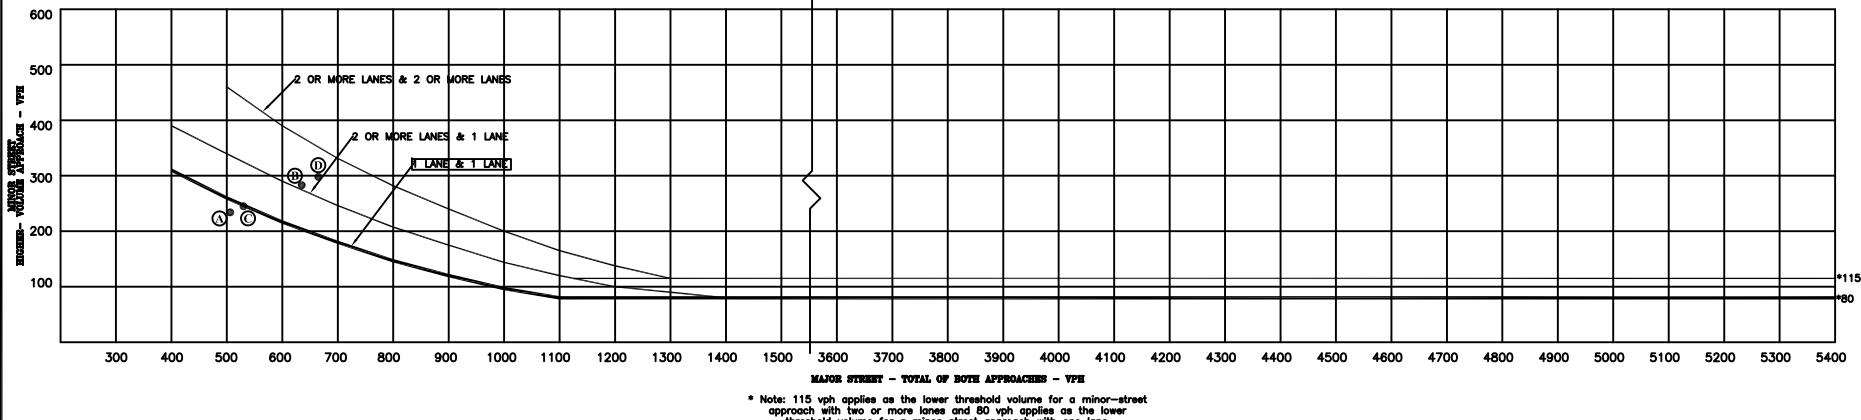

This is intersection #9 on Figures 5a and 9a.

Figure 16b

Warrant 3 - Peak-Hour Vehicular Volume E. Jewell Avenue/E. Yale Avenue

Murphy Creek East (LSC #181110)

Figure 4C-1. Warrant 2, Four-Hour Vehicular Volume

Data Points = (Major Street, Minor Street)

- (A) 2040 Background AM Peak = (506,234)
- (B) 2040 Background PM Peak = (635,283)
- (C) 2040 Total AM Peak = (530,245)
- (D) 2040 Total PM Peak = (665,298)

This is intersection #17 on Figures 5a and 9a.

This warrant could possibly be met by 2040 so is proposed as a single-lane roundabout.

Figure 17a

Warrant 2 - Four-Hour Vehicular Volume Harvest Road/E. Yale Avenue

Murphy Creek East (LSC #181110)

Figure 4C-3. Warrant 3, Peak Hour

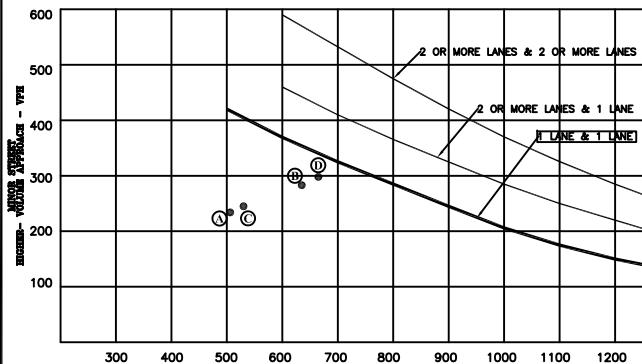

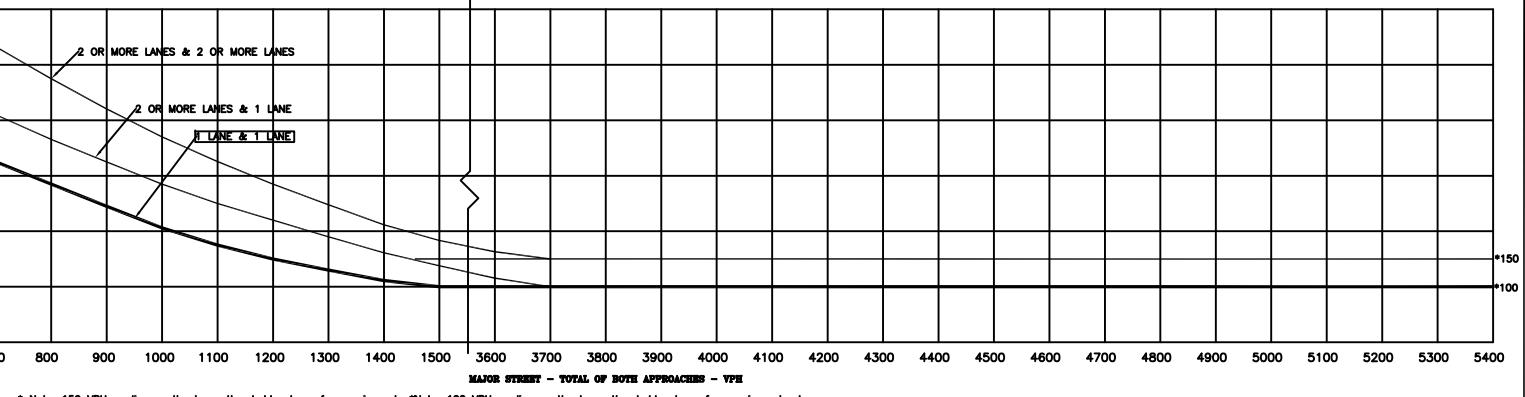

Figure 4C-4. Warrant 3, Peak Hour (70% Factor)

(Density Less than 12,000 population or above 40 mph on Major Street)

Data Points = (Major Street, Minor Street)

- (A) 2040 Background AM Peak = (506,234)
- (B) 2040 Background PM Peak = (635,283)
- (C) 2040 Total AM Peak = (530,245)
- (D) 2040 Total PM Peak = (665,298)

- This warrant will not likely be met by 2040.
- This intersection is proposed as single-lane roundabout.

This is intersection #17 on Figures 5a and 9a.

Figure 17b

Warrant 3 - Peak-Hour Vehicular Volume Harvest Road/E. Yale Avenue

Murphy Creek East (LSC #181110)

LEVEL OF SERVICE DEFINITIONS

From *Highway Capacity Manual*, Transportation Research Board, 2010

SIGNALIZED INTERSECTION LEVEL OF SERVICE (LOS)

<u>LOS</u>	<u>Average Vehicle Delay</u> sec/vehicle	<u>Operational Characteristics</u>
A	<10 seconds	Describes operations with low control delay, up to 10 sec/veh. This LOS occurs when progression is extremely favorable and most vehicles arrive during the green phase. Many vehicles do not stop at all. Short cycle lengths may tend to contribute to low delay values.
B	10 to 20 seconds	Describes operations with control delay greater than 10 seconds and up to 20 sec/veh. This level generally occurs with good progression, short cycle lengths, or both. More vehicles stop than with LOS A, causing higher levels of delay.
C	20 to 35 seconds	Describes operations with control delay greater than 20 and up to 35 sec/veh. These higher delays may result from only fair progression, longer cycle length, or both. Individual cycle failures may begin to appear at this level. Cycle failure occurs when a given green phase does not serve queued vehicles, and overflows occur. The number of vehicles stopping is significant at this level, though many still pass through the intersection without stopping.
D	35 to 55 seconds	Describes operations with control delay greater than 35 and up to 55 sec/veh. At LOS D, the influence of congestion becomes more noticeable. Longer delays may result from some combination of unfavorable progression, long cycle lengths, and high v/c ratios. Many vehicles stop, and the proportion of vehicles not stopping declines. Individual cycle failures are noticeable.
E	55 to 80 seconds	Describes operations with control delay greater than 55 and up to 80 sec/veh. These high delay values generally indicate poor progression, long cycle lengths, and high v/c ratios. Individual cycle failures are frequent.
F	>80 seconds	Describes operations with control delay in excess of 80 sec/veh. This level, considered unacceptable to most drivers, often occurs with over-saturation, that is, when arrival flow rates exceed the capacity of lane groups. It may also occur at high v/c ratios with many individual cycle failures. Poor progression and long cycle lengths may also contribute significantly to high delay levels.

LEVEL OF SERVICE DEFINITIONS

From *Highway Capacity Manual*, Transportation Research Board, 2010

UNSIGNALIZED INTERSECTION LEVEL OF SERVICE (LOS)

Applicable to Two-Way Stop Control, All-Way Stop Control, and Roundabouts

LOS	Average Vehicle Control Delay	Operational Characteristics
A	<10 seconds	Normally, vehicles on the stop-controlled approach only have to wait up to 10 seconds before being able to clear the intersection. Left-turning vehicles on the uncontrolled street do not have to wait to make their turn.
B	10 to 15 seconds	Vehicles on the stop-controlled approach will experience delays before being able to clear the intersection. <u>The delay could be up to 15 seconds.</u> Left-turning vehicles on the uncontrolled street may have to wait to make their turn.
C	15 to 25 seconds	Vehicles on the stop-controlled approach can expect delays in the range of 15 to 25 seconds before clearing the intersection. Motorists may begin to take chances due to the long delays, thereby posing a safety risk to through traffic. <u>Left-turning vehicles on the uncontrolled street will now be required to wait to make their turn causing a queue to be created in the turn lane.</u>
D	25 to 35 seconds	This is the point at which a traffic signal may be warranted for this intersection. The delays for the stop-controlled intersection are not considered to be excessive. The length of the queue may begin to block other public and private access points.
E	35 to 50 seconds	The delays for all critical traffic movements are considered to be unacceptable. The length of the queues for the stop-controlled approaches as well as the left-turn movements are extremely long. <u>There is a high probability that this intersection will meet traffic signal warrants.</u> The ability to install a traffic signal is affected by the location of other existing traffic signals. Consideration may be given to restricting the accesses by eliminating the left-turn movements from and to the stop-controlled approach.
F	>50 seconds	The delay for the critical traffic movements are probably in excess of 100 seconds. The length of the queues are extremely long. Motorists are selecting alternative routes due to the long delays. <u>The only remedy for these long delays is installing a traffic signal or restricting the accesses.</u> The potential for accidents at this intersection are extremely high due to motorist taking more risky chances. If the median permits, motorists begin making two-stage left-turns.
